Chapter 1. Overview

<https://github.com/ga4gh/data-repository-service-schemas>

1.1. Version information

Version : 0.6.0

1.2. Contact information

Contact : GA4GH Cloud Work Stream

Contact Email : ga4gh-cloud@ga4gh.org

1.3. License information

License : Apache 2.0

License URL : <https://raw.githubusercontent.com/ga4gh/data-repository-service-schemas/master/LICENSE>

Terms of service : null

1.4. URI scheme

BasePath : /ga4gh/drs/v1

Schemes : HTTPS, HTTP

1.5. Consumes

- `application/json`

1.6. Produces

- `application/json`

Chapter 2. Executive Summary

The Data Repository Service (DRS) API provides a generic API on top of existing object storage systems so workflow systems can access data in a single, standard way regardless of where it's stored.

Key features of the API:

- **Data Object management**, which enables the creation, updating, deletion, versioning, and unique identification of files and data bundles (flat collections of files)
- **Data Object querying**, which can locate data objects across different cloud environments and DRS implementations.

Chapter 3. Introduction

This document describes the DRS API and provides details on the specific endpoints, request formats, and response. It is intended to provide key information for developers of DRS-compatible services as well as clients that will call these DRS services.

Use cases include:

- GET of resource ID and return JSON metadata describing object
- GET of resource ID and return JSON with URLs for data read access.
- GET of resources by alias
- Bundles of multiple objects
- Versioning of objects (and bundles if supported)

Chapter 4. Standards

The DRS API specification is written in OpenAPI and embodies a RESTful service philosophy. It uses JSON in requests and responses and standard HTTP/HTTPS for information transport.

Chapter 5. Authorization & Authentication

Users must supply credentials that establish their identity and authorization in order to use a DRS endpoint. We recommend that DRS implementations use an OAuth2 [bearer token](#), although they can choose other mechanisms if appropriate. DRS callers can use the [auth_instructions_url](#) from the [service-info endpoint](#) to learn how to obtain and use a bearer token for a particular implementation.

The DRS implementation is responsible for checking that a user is authorized to submit workflow run requests. The particular authorization policy is up to the DRS implementer.

Systems like DRS need to also address the ability to pass credentials with jobs for input and output access. In the current version of DRS, the passing of credentials to authenticate and authorize access to inputs and outputs, as well as mandates about necessary file transfer protocols to support, are out of scope. However, parallel work on the Data Object Service is addressing ways to pass around access credentials with data object references, opening up the possibility that a future version of DRS will provide concrete mechanisms for workflow runs to access data using credentials different than those used for DRS. This is a work in progress and support of DOS in DRS will be added in a future release of DRS.

Chapter 6. Paths

6.1. Create a new Data Bundle

POST /bundles

6.1.1. Parameters

Type	Name	Schema
Body	body <i>required</i>	CreateBundleRequest

6.1.2. Responses

HTTP Code	Description	Schema
200	The Data Bundle was successfully created.	CreateBundleResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.1.3. Tags

- DataRepositoryService

6.2. List the Data Bundles

GET /bundles

6.2.1. Parameters

Type	Name	Description	Schema
Query	alias <i>optional</i>	If provided returns Data Bundles that have any alias that matches the request.	string
Query	checksum <i>optional</i>	The hexlified checksum that one would like to match on.	string

Type	Name	Description	Schema
Query	checksum_type <i>optional</i>	If provided will restrict responses to those that match the provided type. possible values: md5 # most blob stores provide a checksum using this multipart-md5 # multipart uploads provide a specialized tag in S3 sha256 sha512	string
Query	page_size <i>optional</i>	Specifies the maximum number of results to return in a single page. If unspecified, a system default will be used.	integer (int32)
Query	page_token <i>optional</i>	The continuation token, which is used to page through large result sets. To get the next page of results, set this parameter to the value of next_page_token from the previous response.	string

6.2.2. Responses

HTTP Code	Description	Schema
200	Successfully listed Data Bundles.	ListBundlesResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.2.3. Tags

- DataRepositoryService

6.3. Retrieve a Data Bundle

```
GET /bundles/{bundle_id}
```

6.3.1. Parameters

Type	Name	Description	Schema
Path	bundle_id <i>required</i>		string

Type	Name	Description	Schema
Query	version <i>optional</i>	If provided will return the requested version of the selected Data Bundle. Otherwise, only the latest version is returned.	string

6.3.2. Responses

HTTP Code	Description	Schema
200	Successfully found the Data Bundle.	GetBundleResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
404	The requested Data Bundle wasn't found.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.3.3. Tags

- DataRepositoryService

6.4. Update a Data Bundle

```
PUT /bundles/{bundle_id}
```

6.4.1. Parameters

Type	Name	Description	Schema
Path	bundle_id <i>required</i>	The ID of the Data Bundle to update	string
Body	body <i>required</i>	The new content for the Data Bundle identified by the given bundle_id. If the ID specified in the request body is different than that specified in the path, the Data Bundle's ID will be replaced with the one in the request body.	UpdateBundleRequest

6.4.2. Responses

HTTP Code	Description	Schema
200	The Data Bundle was updated successfully.	UpdateBundleResponse
400	The request is malformed.	ErrorResponse

HTTP Code	Description	Schema
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
404	The requested Data Bundle wasn't found.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.4.3. Tags

- DataRepositoryService

6.5. Delete a Data Bundle

```
DELETE /bundles/{bundle_id}
```

6.5.1. Parameters

Type	Name	Schema
Path	bundle_id <i>required</i>	string

6.5.2. Responses

HTTP Code	Schema
200	DeleteBundleResponse

6.5.3. Tags

- DataRepositoryService

6.6. Retrieve all versions of a Data Bundle

```
GET /bundles/{bundle_id}/versions
```

6.6.1. Parameters

Type	Name	Schema
Path	bundle_id <i>required</i>	string

6.6.2. Responses

HTTP Code	Description	Schema
200	The versions for the Data Bundle were found successfully.	GetBundleVersionsResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
404	The requested Data Bundle wasn't found.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.6.3. Tags

- [DataRepositoryService](#)

6.7. Make a new Data Object

POST /objects

6.7.1. Parameters

Type	Name	Description	Schema
Body	body <i>required</i>	The Data Object to be created. The ID scheme is left up to the implementor but should be unique to the server instance.	CreateObjectRequest

6.7.2. Responses

HTTP Code	Description	Schema
200	Successfully created the Data Object.	CreateObjectResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.7.3. Tags

- [DataRepositoryService](#)

6.8. List the Data Objects

GET /objects

6.8.1. Parameters

Type	Name	Description	Schema
Query	alias <i>optional</i>	If provided will only return Data Objects with the given alias.	string
Query	checksum <i>optional</i>	The hexlified checksum that one would like to match on.	string
Query	checksum_type <i>optional</i>	If provided will restrict responses to those that match the provided type. possible values: md5 # most blob stores provide a checksum using this multipart-md5 # multipart uploads provide a specialized tag in S3 sha256 sha512	string
Query	page_size <i>optional</i>	Specifies the maximum number of results to return in a single page. If unspecified, a system default will be used.	integer (int32)
Query	page_token <i>optional</i>	The continuation token, which is used to page through large result sets. To get the next page of results, set this parameter to the value of next_page_token from the previous response.	string
Query	url <i>optional</i>	If provided will return only Data Objects with a that URL matches this string.	string

6.8.2. Responses

HTTP Code	Description	Schema
200	The Data Objects were listed successfully.	ListObjectsResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.8.3. Tags

- DataRepositoryService

6.9. Retrieve a Data Object

```
GET /objects/{object_id}
```

6.9.1. Parameters

Type	Name	Description	Schema
Path	object_id <i>required</i>		string
Query	version <i>optional</i>	If provided will return the requested version of the selected Data Object.	string

6.9.2. Responses

HTTP Code	Description	Schema
200	The Data Object was found successfully.	GetObjectResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
404	The requested Data Object wasn't found	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.9.3. Tags

- DataRepositoryService

6.10. Update a Data Object

```
PUT /objects/{object_id}
```

6.10.1. Parameters

Type	Name	Description	Schema
Path	object_id <i>required</i>	The ID of the Data Object to update	string

Type	Name	Description	Schema
Body	body <i>required</i>	The new Data Object for the given object_id. If the ID specified in the request body is different than that specified in the path, the Data Object's ID will be replaced with the one in the request body.	UpdateObjectRequest

6.10.2. Responses

HTTP Code	Description	Schema
200	The Data Object was successfully updated.	UpdateObjectResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
404	The requested Data Object wasn't found.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.10.3. Tags

- DataRepositoryService

6.11. Delete a Data Object index entry

```
DELETE /objects/{object_id}
```

6.11.1. Parameters

Type	Name	Schema
Path	object_id <i>required</i>	string

6.11.2. Responses

HTTP Code	Description	Schema
200	The Data Object was deleted successfully.	DeleteObjectResponse
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse

HTTP Code	Description	Schema
404	The requested Data Object wasn't found.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.11.3. Tags

- DataRepositoryService

6.12. Retrieve all versions of a Data Object

```
GET /objects/{object_id}/versions
```

6.12.1. Parameters

Type	Name	Schema
Path	object_id <i>required</i>	string

6.12.2. Responses

HTTP Code	Description	Schema
200	The versions for the Data Object were returned successfully.	GetObjectVersions Response
400	The request is malformed.	ErrorResponse
401	The request is unauthorized.	ErrorResponse
403	The requester is not authorized to perform this action.	ErrorResponse
404	The requested Data Object wasn't found.	ErrorResponse
500	An unexpected error occurred.	ErrorResponse

6.12.3. Tags

- DataRepositoryService

6.13. Returns service version and other information

```
GET /service-info
```

6.13.1. Responses

HTTP Code	Description	Schema
200	Service information returned successfully	ServiceInfoResponse

6.13.2. Tags

- DataRepositoryService

Chapter 7. Definitions

7.1. AuthorizationMetadata

OPTIONAL

A set of key-value pairs that represent sufficient metadata to be granted access to a resource. It may be helpful to provide details about a specific provider, for example.

Name	Description	Schema
auth_type <i>optional</i>	The auth standard being used to make data available. For example, 'OAuth2.0'.	string
auth_url <i>optional</i>	The URL where the auth service is located, for example, a URL to get an OAuth token.	string

7.2. Bundle

Name	Description	Schema
aliases <i>optional</i>	A list of strings that can be used to identify this Data Bundle.	< string > array
checksums <i>required</i>	At least one checksum must be provided. The Data Bundle checksum is computed over all the checksums of the Data Objects that bundle contains.	< Checksum > array
created <i>required</i>	Timestamp of object creation in RFC3339.	string (date-time)
description <i>optional</i>	A human readable description.	string
id <i>required</i>	An identifier, unique to this Data Bundle	string
object_ids <i>required</i>	The list of Data Objects that this Data Bundle contains.	< string > array
system_metadata <i>optional</i>		SystemMetadata
updated <i>required</i>	Timestamp of update in RFC3339, identical to create timestamp in systems that do not support updates.	string (date-time)
user_metadata <i>optional</i>		UserMetadata

Name	Description	Schema
version <i>required</i>	A string representing a version, some systems may use checksum, a RFC3339 timestamp, or incrementing version number. For systems that do not support versioning please use your update timestamp as your version.	string

7.3. Checksum

Name	Description	Schema
checksum <i>required</i>	The hex-string encoded checksum for the Data.	string
type <i>optional</i>	The digest method used to create the checksum. If left unspecified md5 will be assumed. possible values: md5 # most blob stores provide a checksum using this multipart-md5 # multipart uploads provide a specialized tag in S3 sha256 sha512	string

7.4. CreateBundleRequest

Name	Schema
bundle <i>optional</i>	Bundle

7.5. CreateBundleResponse

Name	Description	Schema
bundle_id <i>required</i>	The identifier of the Data Bundle created.	string

7.6. CreateObjectRequest

The Data Object one would like to index. One must provide any aliases and URLs to this file when sending the CreateObjectRequest. It is up to implementations to validate that the Data Object is available from the provided URLs.

Name	Schema
object <i>required</i>	Object

7.7. CreateObjectResponse

Name	Description	Schema
object_id <i>optional</i>	The ID of the created Data Object.	string

7.8. DeleteBundleResponse

Name	Schema
bundle_id <i>optional</i>	string

7.9. DeleteObjectResponse

Name	Description	Schema
object_id <i>required</i>	The identifier of the Data Object deleted.	string

7.10. ErrorResponse

An object that can optionally include information about the error.

Name	Description	Schema
msg <i>optional</i>	A detailed error message.	string
status_code <i>optional</i>	The integer representing the HTTP status code (e.g. 200, 404).	integer

7.11. GetBundleResponse

Name	Schema
bundle <i>optional</i>	Bundle

7.12. GetBundleVersionsResponse

Name	Description	Schema
bundles <i>required</i>	All versions of the Data Bundles that match the GetBundleVersions request.	< Bundle > array

7.13. GetObjectResponse

Name	Schema
object <i>required</i>	Object

7.14. GetObjectVersionsResponse

Name	Description	Schema
objects <i>required</i>	All versions of the Data Objects that match the GetObjectVersions request.	< Object > array

7.15. ListBundlesRequest

Only return Data Bundles that match all of the request parameters. A page_size and page_token are provided for retrieving a large number of results.

Name	Description	Schema
alias <i>optional</i>	If provided returns Data Bundles that have any alias that matches the request.	string
checksum <i>optional</i>	The hexlified checksum that one would like to match on.	string
checksum_type <i>optional</i>	If provided will restrict responses to those that match the provided type. possible values: md5 # most blob stores provide a checksum using this multipart-md5 # multipart uploads provide a specialized tag in S3 sha256 sha512	string
page_size <i>optional</i>	Specifies the maximum number of results to return in a single page. If unspecified, a system default will be used.	integer (int32)

Name	Description	Schema
page_token <i>optional</i>	The continuation token, which is used to page through large result sets. To get the next page of results, set this parameter to the value of next_page_token from the previous response.	string

7.16. ListBundlesResponse

A list of Data Bundles matching the request parameters and a continuation token that can be used to retrieve more results.

Name	Description	Schema
bundles <i>optional</i>	The list of Data Bundles.	< Bundle > array
next_page_token <i>optional</i>	The continuation token, which is used to page through large result sets. Provide this value in a subsequent request to return the next page of results. This field will be empty if there aren't any additional results.	string

7.17. ListObjectsRequest

Allows a requester to list and filter Data Objects. Only Data Objects matching all of the requested parameters will be returned.

Name	Description	Schema
alias <i>optional</i>	If provided will only return Data Objects with the given alias.	string
checksum <i>optional</i>	The hexlified checksum that one would like to match on.	string
checksum_type <i>optional</i>	If provided will restrict responses to those that match the provided type. possible values: md5 # most blob stores provide a checksum using this multipart-md5 # multipart uploads provide a specialized tag in S3 sha256 sha512	string
page_size <i>optional</i>	Specifies the maximum number of results to return in a single page. If unspecified, a system default will be used.	integer (int32)

Name	Description	Schema
page_token <i>optional</i>	The continuation token, which is used to page through large result sets. To get the next page of results, set this parameter to the value of next_page_token from the previous response.	string
url <i>optional</i>	If provided will return only Data Objects with a that URL matches this string.	string

7.18. ListObjectsResponse

A list of Data Objects matching the requested parameters, and a paging token, that can be used to retrieve more results.

Name	Description	Schema
next_page_token <i>optional</i>	The continuation token, which is used to page through large result sets. Provide this value in a subsequent request to return the next page of results. This field will be empty if there aren't any additional results.	string
objects <i>optional</i>	The list of Data Objects.	< Object > array

7.19. Object

Name	Description	Schema
aliases <i>optional</i>	A list of strings that can be used to find this Data Object. These aliases can be used to represent the Data Object's location in a directory (e.g. "bucket/folder/file.name") to make Data Objects more discoverable. They might also be used to represent	< string > array
checksums <i>required</i>	The checksum of the Data Object. At least one checksum must be provided.	< Checksum > array
created <i>required</i>	Timestamp of object creation in RFC3339.	string (date-time)
description <i>optional</i>	A human readable description of the contents of the Data Object.	string
id <i>required</i>	An identifier unique to this Data Object.	string
mime_type <i>optional</i>	A string providing the mime-type of the Data Object. For example, "application/json".	string

Name	Description	Schema
name <i>optional</i>	A string that can be optionally used to name a Data Object.	string
size <i>required</i>	The computed size in bytes.	string (int64)
updated <i>optional</i>	Timestamp of update in RFC3339, identical to create timestamp in systems that do not support updates.	string (date-time)
urls <i>optional</i>	The list of URLs that can be used to access the Data Object.	< URL > array
version <i>optional</i>	A string representing a version.	string

7.20. ServiceInfoResponse

Placeholder for the Info Object

Name	Description	Schema
contact <i>optional</i>	Maintainer contact info	object
description <i>optional</i>	Service description	string
license <i>optional</i>	License information for the exposed API	object
title <i>optional</i>	Service name	string
version <i>required</i>	Service version	string

7.21. SystemMetadata

OPTIONAL

These values are reported by the underlying object store.

A set of key-value pairs that represent system metadata about the object.

Type : object

7.22. URL

Name	Description	Schema
authorization_metadata <i>optional</i>		AuthorizationMetadata

Name	Description	Schema
system_metadata <i>optional</i>		SystemMetadata
url <i>required</i>	A URL that can be used to access the file.	string
user_metadata <i>optional</i>		UserMetadata

7.23. UpdateBundleRequest

Name	Schema
bundle <i>required</i>	Bundle

7.24. UpdateBundleResponse

Name	Description	Schema
bundle_id <i>required</i>	The identifier of the Data Bundle updated.	string

7.25. UpdateObjectRequest

Name	Schema
object <i>required</i>	Object

7.26. UpdateObjectResponse

Name	Description	Schema
object_id <i>required</i>	The identifier of the Data Object updated.	string

7.27. UserMetadata

OPTIONAL

A set of key-value pairs that represent metadata provided by the uploader.

Type : object
